

Training for Commercial Aircraft Operated by Government and Military Agencies

Type-Specific Training To Accommodate Virtually Any Mission

Drawing on the world's largest fleet of aircraft simulators and on our long, close relationships with aircraft manufacturers, we provide unmatched type-specific pilot training for government and military versions of commercial aircraft. Our simulator technology and training services cover a full complement of aircraft deployed by militaries, governments and law enforcement worldwide.

Training can be designed to accommodate virtually any mission, including combat tactics, medical transport and command and control operations.

Global Government Customized Training

FlightSafety International is proud to offer customized training for commercial aircraft operated by government and military agencies. Our goal is to provide world-class training that best fits your training requirements. This flexibility allows for world government operators to utilize their own checklist and standard operating procedures all while using state-of-the-art technology. This enhances the training experience by maintaining fluency and realism to the way you operate your aircraft.

Additionally, FlightSafety is offering professional aircraft maintenance, flight attendant and aircraft dispatcher training to help support your government's aircraft operations. Our highly experienced team will ensure advanced quality training that far exceeds expectations. To increase your professional development FlightSafety also offers enrichment courses by way of eLearning or LiveLearning. What does that mean for you? You can take a safety of flight course all in the comfort of your home or office.
