

PROFESSIONAL AVIATION TRAINING

Gulfstream Advanced Energy Management

Course Information

The Advanced Energy Management Course focuses on the physics of operating aircraft during the descent phase of flight. With the completion of up to 10 different scenarios in each 2-hour simulator period, pilots will learn the tools available to understand their “energy state” at any given point on the descent. By utilizing these tools, pilots will be able to predict in advance whether or not they will meet stabilized approach criteria while still very far out from touchdown. This will allow flight crews to act much earlier than before in resolving any high energy problems while they are still easily handled, leading to far more stabilized approaches.

Course Curriculum	6 Hours
Course Module	
Briefing/Debriefing	2.0 hours
Simulator Session for Single Client	2.0 hours
Simulator for Crew of two	4.0 hours
<hr/>	
Gulfstream G450/G550/G650	
Gulfstream G280/GIV/GV	

Prerequisite – Pilots must train in the same Gulfstream model that they have currently trained on within the past 12 months with FlightSafety. It is recommended that this course be taken as a crew for maximum effectiveness.

Training is available at the following Learning Centers:

- G280 – Dallas North and Savannah
- GIV – Long Beach, Savannah, and Wilmington
- GV – Long Beach, Savannah, and Wilmington
- G450 – Dallas North, Long Beach, Savannah, and Wilmington
- G550 - Dallas North, Long Beach, Savannah, and Wilmington
- G650 - Long Beach, Savannah, and Wilmington

Course Dates: This course is scheduled on request. Please contact your Learning Center for more details.
