

# Gulfstream G350/G450 Engine Run & Taxi Update

## Course Information

### Course Description – 1 Day Course

This course is appropriate for Maintenance Technicians who may be required to taxi and perform engine parameter checks on the G450 aircraft. Consisting of three modules, training combines ground school and simulator training to cover normal, abnormal and emergency procedures.

The course is usually taken in conjunction with a Maintenance Initial, Update or Troubleshooting course but can be conducted on a standalone basis provided the technician has completed the initial or update course.

Completion of the program ensures enhanced safety during engine run-up and taxiing, and a heightened level of system knowledge.

Upon successful completion of this course the participant should receive a final check at his or her own work center.

FlightSafety Material Number ..... 304369

### STANDARDIZED MODULE

Ground School Course Modules	Hours
Airport Signs and Markings .....	2.00
